HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

DETAILED ACTION

Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the Specification:

The title has been changed to: "Reflective Stereoscopic Display with First and Second Liquid Crystal Cells".

End of Examiner's Amendment.

Response to Arguments

2. Applicant's arguments, see pages 7-8, filed 26 November 2007, with respect to claim 1 have been fully considered and are persuasive, particularly in that *Hiji et al. (US 6,580,482)* does not disclose a first or second liquid crystal cell "comprising a plurality of first/second full-color pixel elements configured to produce full-color images" or wherein "the first perspective view being separate from the second perspective view". Instead,

Hiji discloses single color liquid crystal cells, wherein the first and second perspectives would not be separate. The rejection of claim 1 has been withdrawn.

Allowable Subject Matter

3. Claims 1-5, 8, 10, 12, 13, 18, 21, and 24 are allowed.
4. The following is an examiner's statement of reasons for allowance:

Claim 1 recites a reflective display apparatus comprising a first liquid crystal cell, said first liquid crystal cell comprising a plurality of first full-color pixel elements configured to produce full-color images, said first pixel elements being controllable between a non-reflective state, in which electromagnetic radiation having a first polarization is reflected to a first extent, and a reflective state, in which said electromagnetic radiation having a first polarization is reflected to a second extent, said second extent being greater than said first extent, wherein the first liquid crystal cell is further configured to reflect electromagnetic radiation of the first polarization according to a first perspective view of a full-color image in a first direction; and a second liquid crystal cell, said second liquid crystal cell comprising a plurality of second full-color pixel elements configured to produce full-color images, said second pixel elements being controllable between a non-reflective state, in which electromagnetic radiation having a second polarization is reflected to a third extent, and a reflective state, in which said electromagnetic radiation having a second polarization is reflected to a fourth extent, said fourth extent being greater than said third extent, wherein the second liquid crystal cell is further configured to reflect electromagnetic

radiation of the second polarization according to a second perspective view of the full-color image in a second direction, the first perspective view being separate from the second perspective view, and the first direction being different from the second direction, further characterized in that said first and second liquid crystal cells are configured so that said first polarization is different from said second polarization.

Hiji et al. (US 6,580,482), *Kobayashi et al.* (US 2003/0206260), *Hisamitsu et al.* (US 2002/0176041), *Faris et al.* (US 5,537,144), and *Harada et al.* (US 6,392,725) each discloses first and second liquid crystal cells with pixel elements, each being controllable between a reflective and non-reflective state, and each reflecting a first and second polarization according to a first / third and second / fourth extent, respectively, the second / fourth extent being greater than the first / third extent, respectively, and. However, *Hiji*, *Kabayashi*, *Hisamitsu*, and *Harada*, nor none of the prior art, do not disclose wherein the first or second liquid crystal cells have full-color pixel elements producing full-color images, or wherein the first LC cell produces a first perspective in a first direction that is separate from a second perspective in a second direction produced by the second liquid crystal cell. Furthermore, it would not have been obvious to modify the references to gain the claimed invention. Claim 1 is allowed, as are dependent claims 2-5, 8, 10, 12, 13, 18, 21, and 24.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
